

Product FAQ's

Q: *Does the product have an odor?*

A: Yes, upon initial application due to its organic material "sugar beets". The odor will subside after a few hours.

Q: *What Colour is it?*

A: FUSION Liquid De-icer's natural colour is dark brown, therefore it will apply similar.

Q: *Will the product stain?*

A: No, the product is completely water soluble (washes off with water) and will not leave any visible signs.

Q: *What is the application rate?*

A: Anti icing/De icing walkways use approximately 4 litres per 1000 sq ft.
Anti icing/De icing parking lots use approximately 6 litres per 1000 sq ft.
Stockpile Treatment use approximately 15 litres per 1 metric ton.

Q: *Is it sticky immediately after application?*

A: The product will be slightly tacky after application until it dries into the surface. This drying time that is essential to the longevity of the residual of the product. Once dried, product will no longer be tacky.

Q: *How long will an application last without precipitation?*

A: Great question! We would have to get a response from Mother Nature herself. There are so many variables that come into play for the longevity of any Liquid De-icer; weather, traffic volumes and load weights. Many of our customers will get an 1-2 weeks with just one application with no precipitation!

Q: *If some of the product gets on my grass will it kill it?*

A: No, it will not kill the grass.

Q: *If this product safe for pets?*

A: Yes, it is safe for use around pets.

Q: *Who much snow will this product melt?*

A: When applied before a winter storm as an Anti-icer the product is not intended to melt large amounts of snow. Its purpose is to prevent the bond of snow and ice to the surface allowing removal to be easier eliminating hard pack and black ice. Although a trace – 2cms of snow have been reported to melt when the FUSION Liquid De-icer has been applied as and Anti-icer.
